                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an engineered CD44 antibody for inducing the differentiation and wither of leukemia cells, the gene in the heavy chain and light chain variable region of monoclonal antibody H144a of CD44, the polypeptide coded by said gene, the carrier containing said gene, and the application of said gene and polypeptide in preparing medicines for diagnosing and treating leukemia and disclosed. The present sequence represents the amino acid sequence of the mouse CD44 antibody V segment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-CD16A antibody; mouse; 3G8 antibody; humanised anti-CD16A antibody; immune response; haemostatic; antirheumatic; antiarthritic; dermatological; immunosuppressive; antiinflammatory; antianaemic; vasotropic; nephrotropic; neuroprotective; antipsoriatic; uropathic; ophthalmological; antiasthmatic; inflammatory response; autoimmune disease; idiopathic thrombocytopenic purpura; rheumatoid arthritis; systemic lupus erythematosus;

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of couse antibody 308. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising comperciation from a human 1gG heavy chain, where the For region carried from a human ligh have been chence binding to an FC antiarthritic, dermatological, immunosuppressive, antiinflammatory.

CC effector ligand (I) and (II) have haemostatic, antirheumatic, antianaemic, vasotropic, nephrotropic, neuroprotective, antipsoriatic, antianaemic, ophthalmological and antiasthmatic activities. (I) or (II) is cusful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune cuseful for reducing a deleterious immune response is an inflammatory response caused by autoimmune disease such as clatopathic thrombocytopenic purpura (ITP), rheumatolous (AMA), scleroderma, autoantibody trigged urticaria, pemphigus, vasculitis corpatic arthritis, ankylosing spondare, which intravenous (MS), psoriatic arthritis, ankylosing spondare, which intravenous corporatic arthritis, and sease, polymyositis and dermatomyce immunorlobulin (IVIC) therawn of all parcit as thms. The new new remains a mammal and mammal which and mammal and mamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
autoantibody trigged urticaria; pemphigus; vasculitis syndrome; systemic vasculitis; Godgasture's syndrome; multiple sclerosis; psoriatic arthritis; ankylosing spondylitis; Sjogren's syndrome; Kowasaki's disease; polymyositis; dermatomyositis; allergic asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

Claim 12; SEQ ID NO 109; 103pp; English.

the present invention describes an anti-ULIGA antibody (1) comprising a decrease and domain comprising complementarity determining regions (CDRs) derived from the mouse 368 antibody light chain or a humanised anti-CD16A derived from the mouse 368 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 368. Also described is a method (M1) for reducting of deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an Fc region derived from a human 1gG heavy chain, where the Fc region lacks effector function or is modified to reduce binding to an Fc effector ingand (1) have haemostatic, antituteumatic, antiarthritic, dermatological, immunosuppressive, antiinflammatory, antianaemic, vasotropic, nephrotropic, neuroprotective, antiporiatic, antianaemic, vasotropic, nephrotropic, neuroprotective, antiporiatic, antianaemic, vasotropic, nephrotropic, neuroprotective, antiporiatic, or useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (1) or (II). The deleterious immune response is an inflammatory response in an animal which involves administering to the mammal (1) or (II). The deleterious immune cresponse is an inflammatory response clused by autofinmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic lupus erythematosus (SLE), eutoimmune haemolytic anaemia (AHA), systemic vasculitis, ankylosing spondylltis, Sjogren's syndrome, systemic vasculitis, ankylosing spondylltis, Sjogren's syndrome, syndrome, systemic vasculitis, ankylosing spondylltis, sjogren's syndrome, and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence immunospone in the exemplification of the present invention. The present invention describes an anti-CD16A antibody (I) comprising a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 3GB antibody leavy chain and a VL domain comprising CDRs derived from the mouse 3GB antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CD16A mouse antibody 3GB. Also described is a method (M1) for reducing a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an FC region derived from a human IgG heavy chain, where the FC region lacks effector function or is modified to reduce binding to an FC effector ligand. (I) and (II) have haemostatic, antirheumatic, arriarchritic, dermatological, immunosuppressive, antiinflammatory, antianaemic, vasotropic, nephrotropic, neuroprotective, antipsoriatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           anti-CD16A antibody; mouse; 3G8 antibody; humanised anti-CD16A antibody;

uropathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), scytemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), scleroderma, autoantibody trigged urticaria, pemphigus, vasculitis syndrome, systemic vasculitis, Goodpasture's syndrome, multiple sclerosis (MS), psoriatic arthritis, ankylosing spondylltis, Sjogren's syndrome, Rowasaki's disease, polymyositis and dermatomyositis and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3GB antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody light chain or a humanised anti-CD16A derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 368. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reducting, which involves administering to the mammal a CD16A binding protein comprising an FC region derived from a human 1gG heavy chain, where the FC region lacks effector function or is modified to reduce binding to an FC effector ligand. (I) and (II) have haemostatic, antirheumatic, antiarthritic, dermatological, immunosuppressive, antipheamatory, antipheamatory, confident and antiasthmatic activities. (I) or (II) is antiarthritic, ophthalmological and antiasthmatic activities. (I) or (III) is useful for reducing a deleterious immune response in a mammal which response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RAA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic vasculitis, ankylosing spondyllitis, Sjogren's syndrome, systemic vasculitis, ankylosing spondyllitis, Sjogren's syndrome, systemic vasculitis, ankylosing spondyllica, syndrome, systemic vasculitis, ankylosing spondyllica, syndrome, systemic vasculitis, ankylosing spondyllica, theratomycallum (IVIG) therapy e.g., allergic asthma. The present sequence constitution immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                 The present invention describes an anti-CD16A antibody (1) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody heavy chain and a VL domain comprising CDRs derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of couse antibody 368. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reducting, which involves administering to the mammal a CD16A binding protein comprising a RF cergoin derived from a human 1gG heavy chain, where the RC region lacks effector function or is modified to reduce binding to an FC effector ligand. (I) and (II) have heemostatic, antitheumatic, antianaemic, vasotropic, nephrotropic, neuroprotective, antiphematic, antianaemic, vasotropic, nephrotropic, neuroprotective, antiphematic, curopathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (ITP), rheumatoid arthritis (RA), systemic luguas erythematous (SLB), autoimmune haemolytic ansenda (AHA), selectoderma, autoantibody trigged utricaria, pemphigus, vasculitis syndrome, systemic vasculitis, ankylosing spondylitis, Slogren's syndrome, syndrome, Kowasaki's disease, polymyositis and also for treating diseases susceptible to treatment with intravenous immuned in mammal (IVI) therapy e.g., allergic asthma. The present sequence is mannal strain of the present sequence is an intending disease susceptible to treatment the present sequence is mammal of the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                         Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         anti-CD16A antibody; mouse; 3G8 antibody; humanised anti-CD16A antibody; immune response; haemostatic; antirheumatic; antiarthritic; dermatological; immunosuppressive; antiinflammatory; antianaemic; vasotropic; nephrotropic; neuroprotective; antipsoriatic; uropathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody heavy chain and a VL domain comprising CDRs derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of couse antibody 308. Also described is a method (MI) for reduction a construction and comprises all six CDRs of involves administering to the mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising compared from a human IgG heavy chain, where the Fc region lacks effector function of (I) and (II) have haemostatic, antirheumatic, antianaemic, vasotropic, nephrotropic, neuroprotective, antiphamatory, antianaemic, vasotropic nephrotropic, neuroprotective, antipportatic, or uropathic thrombocytopenic numune tasponse in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such a diopathic thrombocytopenic purpura (ITP), rheumatoid architis (AHA), selectederma, autoantibody trigged urticaria, pemphigus, vasculitis clarantic architits, ankylosing spondylitis, Sjogren's syndrome, systemic vasculitis and diseases succeptible to treatment with intravence and also for treating diseases succeptible to treatment with intravence immunely and alsomer as promoved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence
is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
psoriatic arthritis; ankylosing spondylitis; Sjogren's syndrome;
Reiter's syndrome; Kowasaki's disease; polymyositis; dermatomyositis;
allergic asthma.

anti-protein C monoclonal antibody HPC-4 heavy chain variable region. HPC-4 recognises the activation peptide region (AAR88106) of the heavy chain of protein C, a vittamin K-dependent plasma protein zymogen. Protein C is converted to activated protein C (APC) by cleavage between the Arg-Leu prevents protein C activation to APC by binding to this region. HPC-4 prevents protein C activation to APC by binding to this region. The DNA sequences encoding the variable regions of the heavy and light chains of the antibody (AAT09299-302) were used to construct humanised antibodies using the PCR primars AAT09303-9. The humanised antibodies are useful as inhibitors of coagulation and can be used for the treatment of tumours by inhibiting the anticoagulant activity of APC by preventing conversion of
                                                                                                                                                                                                           Calcium-binding monoclonal antibody immunoreactive with Protein C - inhibits Protein C anticoagulant activation by thrombin-thrombomodulin, e.g. for treating tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprising different groups of peptides each group being capable of raising, in an infected individual, an antibody able to bind to the hypervariable 1 (HVR1) region of the envelope protein E2 of the infecting HCV strain. The different groups of peptides are administered sequentially to raise antibodies, helper T-lymphocytes, and cytotoxic T-lymphocytes which are cross-reactive to the HVR1 region of the infecting HCV. The vaccines are useful for preventing and treating chronic HCV infections. ABG67186-ABG67189 represent variable regions of human 1gG1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a hepatitis C virus (HCV) vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hepatitis C virus (HCV) vaccines able to raise antibodies, helper 'lymphocytes and/or cytotoxic T lymphocytes able to bind to the hypervariable 1 region of the infecting HCV strain.
                                                                      Hepatitis C virus vaccine; HCV; hypervariable region 1; HVR1; envelope protein E2; antibody; helper T-lymphocyte; IgG1; cytotoxic T-lymphocyte; HCV infection; virucide; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 121;
                                     Human IgG1 antibody heavy chain variable region 15H4VH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 84.5; DB 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 2
A49442
Ig heavy chain V region (50.1) - mouse (fragment)
C; Species: Mus musculus (house mouse)
C; Date: 21-U1-1995 #sequence_revision 21-U1-1995 #text_change 21-Jan-2000
C; Jacession: A49442
R; Stura, E.A.; Stanfield, R.L.; Fieser, G.G.; Silver, S.; Roguska, M.; Hincapie, L.M.; SPCOTEINS 14, 499-508, 1992
A; Title: Crystallization, sequence, and preliminary crystallographic data for an antipep A; Reference number: A49442
A; Status: preliminary; not compared with conceptual translation
A; Molecule type: DNA
A; Residues: 1-107 <STU
A; Cross-references: UNIPARC:UPIO0001768FD
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F; 7-91/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ig heavy chain precursor V-D-J region - mouse (fragment)

A,Note: the authors translated the codon TAT for residue 50 as Thr
C,Comment: This antibody is produced by Epstein-Barr virus-transformed B cell that bears
C,Superfamily: immunoglobulin homology but the codon TAT for residue 50 as Thr
C,Reywords: heterotetramer; immunoglobulin
F;15-97/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Cross-references: UNIPARC:UP10000116403; EMBL:Z12328; NID:g32873; PIDN:CAA78198.1; PID C;Superfamily: immunoglobulin V region; immunoglobulin homology C;Keywords: heterotetramer; immunoglobulin

A;Note: the sequence was determined from the differentiated gene
A;Note: the authors translated the codon GGG for residue 16 as Trp, TGG for residue 142
As Ser, and CAG for residue 147 as Ser
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

554228
Grand Heavy chain V region precursor - sheep (fragment)
Grand Heavy chain V region precursor - sheep (fragment)
Gracession: Solution of the same of the state (domestic sheep)
Gracession: S54228
Albeotription: Sheep immunoglobulin mu heavy chain variable region sequence.

"Cytochrome P4508 from the malaria vector, Anopheles gambiae.";

"Cytochrome P4508 from the malaria vector, Anopheles gambiae.";

Submitted (SEP-2004) to the EMBL/GenBank/DDBU databases.

"C. - SIMILARITY: Belongs to the cytochrome P450 family.

The Anopheles gambiae Sequence Committee;

Submitted (APR-2004) to the EMBL/GenBank/DDBJ databases.

-I-CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.

-I-SIMILARITY: Belongs to the cytochrome P450 family. REMBL; AABD01008811; EAL41693.1; -; Genomic_DNA.
